What is VEX 123?

- Takes Computer Science off the screen and brings it to life
- Can code in multiple ways
- Easy to learn & easy to teach
- Designed by teachers, for teachers
- [Free curricular materials and teacher support resources](#)

Three Ways to Code

Build JOSH – Intro to Building Book

Get Ready...Get VEX...GO!

Get Ready...Get VEX...GO!

Congratulations! You just made your first VEX GO build! Now you can use your imagination to make J.O.S.H. the robot come to life! Move the arms to wave, or move the legs to dance, or give J.O.S.H. a voice and talk to your partner!

•• 17 ••

VEX GO Builds

Spring Car

Car that uses the physics of a slingshot to propel movement. In this build, the "slingshot" feature is built into the car, and can be launched from any solid surface.

Bunny Traits

Ladder Rescue Activity

Design and build a ladder to help Col. Jo rescue the trapped animal

Goal of the Activity:

An animal is 25 centimeters off the ground and you have to build a ladder to help Col. Jo save it.

Ladder Rescue

Design and build a ladder to help Col. Jo rescue the trapped animal!

Using VEX GO pieces, create your very own ladder to save the animal from the tree.

Step by Step

1. An animal is stuck 25 centimeters (about 10 inches) off the ground and you have to build a ladder to help Col. Jo save it! Use the [Interactive Parts Poster](#) and sketch out what you want your ladder to look like.
 - o How many rungs will there be?
 - o What will the rungs be made of standoffs or connectors?
 - o How wide will the rungs be?
2. Match standoffs, connectors, and beams to your ladder plan so you can build your ladder with VEX GO pieces! Begin by laying out your standoffs, connectors, or beams to see how many rungs you will need.
3. The image to the right is one possible solution to our ladder problem. Can you think of another solution? Remember, there should be a gap between your beams so Col. Jo is able to climb the ladder.

'LEVEL UP'

- **Treehouse** - Build an elevated platform using VEX GO Kit contents that will hold the trapped animal 25 centimeters (about 10 inches) off the ground.
- **Extra Level** - Another animal is stuck 50 centimeters (about 20 inches) off the ground! Can you make a ladder that can reach this height to save the animal?

Pro Tips

Connect your ladder uprights with more than one rung. More than one connection will not allow your uprights to spin freely, as seen here.

Standard: ISTE (4) Innovative Designer - 4a: Students know and use a deliberate design process for generating ideas, testing theories, creating innovative artifacts or solving authentic problems.

Raft Rescue Activity

Design and build a raft to help Col. Jo rescue an animal stranded on the water?

Goal of the Activity:

Build a “raft” out of connectors, large beams, pins and whatever else you think is helpful. Next, attach your ladder and save the day.

Raft Rescue

Design and build a raft to help Col. Jo rescue an animal stranded on the water!

Build a raft, attach your ladder, and save the stranded animal on the pond.

Step by Step

1. Build a “raft” out of connectors, large beams, pins, and whatever else you believe is helpful, attach your ladder, and save the day!
2. Use the [Interactive Parts Poster](#) and sketch out what you want your raft to look like. How big will it be? How many pieces will there be? How wide will it be?
3. Match large beams, plates, connectors, and pins to your raft plan so you can build your raft with VEX GO pieces!
4. The image to the right is one possible solution for inspiration. Try using different beams! Can you think of some benefits to making the raft bigger? Wider? Smaller?

‘LEVEL UP’

- **Add Storage** - Your raft may need somewhere to store emergency supplies. Create a small basket or cabinet for supplies using VEX GO pieces for your raft.
- **Add a ladder** - Sometimes both a raft and a ladder are needed. Add a ladder to your raft to make it an even better rescue vehicle.

Pro Tips

Lay it Out

As you create your raft, think about where Col. Jo and the rescued animal will fit. If you are unsure of where to start, try drawing your raft idea and laying out the Kit pieces on top of your drawing. Use Col. Jo from your Kit to test out different ideas.

Standard: ISTE (4) Innovative Designer - 4a: Students know and use a deliberate design process for generating ideas, testing theories, creating innovative artifacts or solving authentic problems.

Mobile Rescue Activity

Make your raft mobile to help your neighbors. Attach wheels to your raft to turn it into a fire truck.

Goal of the Activity:

The neighboring town needs help. Attach wheels to your raft to make it a fire truck to drive to the town and save the day.

Mobile Rescue

Make your raft mobile to help your neighbors!

Attach wheels to your raft to turn it into a fire truck, and use it to save the day in the town over.

Step by Step

1. The neighboring town needs help! Attach wheels to your raft to make it a fire truck, drive over, and save the day!
2. Make a plan for how you will add wheels to your raft to get you to the next town. How are you going to attach your wheels? How many wheels will you use?
3. Add the wheels according to your plan. Is your fire truck able to move?
4. Once you have everything assembled, add a personal touch! Add decorations and or more pieces of equipment that you think are necessary for a fire rescue operation.

'LEVEL UP'

- **Extra Level** - Can you build a ladder to reach objects at the height of 50 centimeters (about 20 inches) from the ground? Having a ladder that reaches higher allows a Fire Truck to be more dependable. Make sure to balance your chassis to hold the ladder upright!
- **Movable Ladder** - Can you control your ladder with a knob like this image? A ladder that can be put up or down means you can travel a lot easier with the ladder attached.

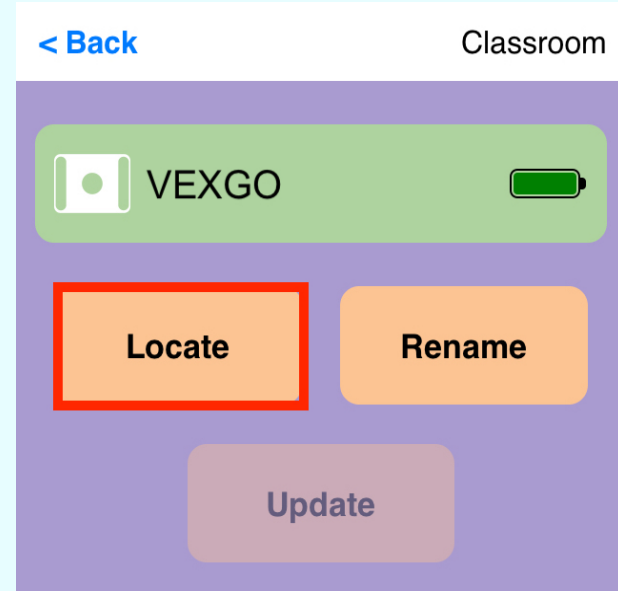

Pro Tips

Connection Point

Take note of the different holes on the wheels! The blue wheel has a round hole, while the gray wheel and green pulley have square holes. A circular hole allows you to connect the wheel to the base with pins and standoffs, while the square hole can be connected to the base with a shaft. Remember, pins snap into place, while shafts do not, meaning you have to secure it with something (like a rubber shaft collar!).

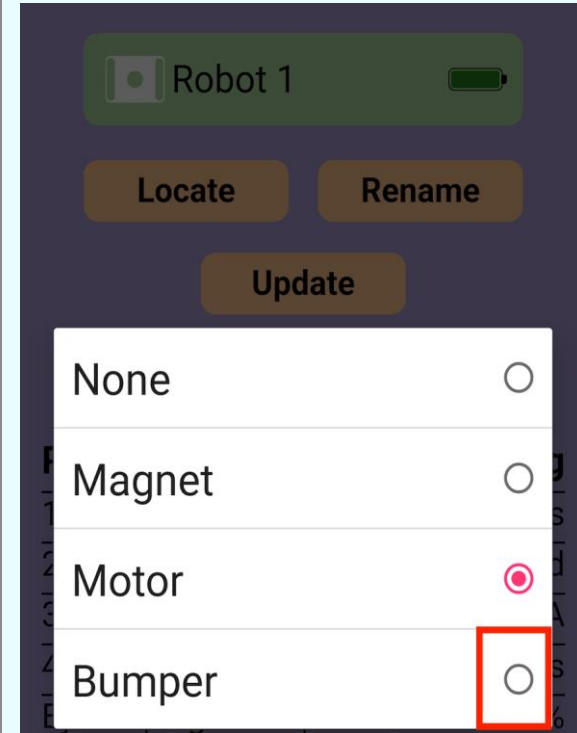

Using the Classroom App

Using the Classroom App - Troubleshooting

| Port | Type | Reading |

Ocean Emergency

3 Labs

Apply coding skills to help clean up the ocean using Code Base and VEXcode GO.

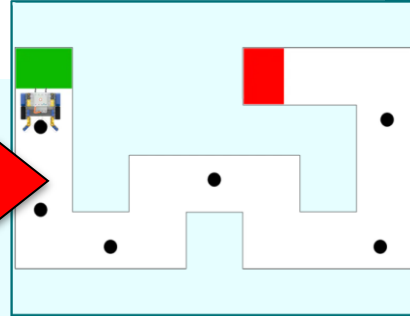

Lab 1

Plan and Build

A photograph of a VEX GO robot assembly. The robot is built on a grey base with two large black wheels and two smaller blue wheels. It has a white VEX GO controller on top, connected to a yellow motor. A red arrow points from the robot assembly to the right.

Lab 2

Drive and Apply

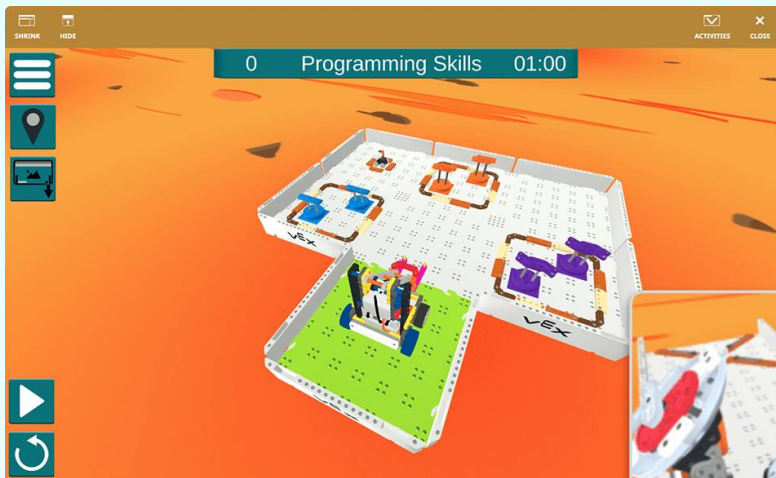

A photograph of the same VEX GO robot assembly as in Lab 1, but with a white sensor block attached to the front. A red arrow points from the robot assembly to the right.

Lab 3

Practice and Drive

A diagram of a maze with a white path and black walls. The maze starts with a green square at the top left and ends with a red square at the top right. There are several black dots scattered throughout the maze. A red arrow points from the maze to the right.

Online Computer Science Courses

Computer Science Activities + Resources

Access a library of activities and resources to implement VEXcode VR within an existing lesson or as a stand-alone fun activity.

Computer Science Level 1 - Blocks

Begin the journey into learning Computer Science with the VEXcode VR Computer Science Level 1 - Blocks course! Using VEXcode VR and engaging robotics-based activities, students will learn about project flow, loops, conditionals, algorithms.

Computer Science Level 1 - Python

Continue on your Computer Science journey with text-based coding in VEXcode VR Python! Using a VR Robot to solve various coding challenges, students will learn about project flow, loops, conditions, and algorithms in Python.

Activities

Castle Color Match

Program the VR Robot to pick up and place disks around the Castle!

Draw a House

Showcase your artistic skills by programming the VR Robot to draw a house.

Dynamic Wall Maze

Create an algorithm to navigate the VR Robot through multiple wall mazes in this constantly changing challenge.

Color Counting Algorithms

Program the VR Robot to detect the color and location of lines.

Coral Reef Cleanup

Help clean the Mangrove Reef by collecting as much trash as you can before the solar-powered batteries on your robot run down.

Disk Mover

Use the electromagnet to pick up and place colored disks into different colored goals to complete challenges.

Sensing Colors

Program the VR Robot to draw and detect different colored lines.

Mondrian Patterns

Program your VR Robot to create a work of modern art inspired by Mondrian.

Counting Lines

Program the VR Robot to track the number of black lines detected using variables.

Cross Every Number

Program the VR Robot to cross off each number from 1-100.

Encoded Message

Use sensors on the VR Robot and Lists (arrays) to decode the message represented by binary ASCII characters.

Robot Vacuum

Program the VR Robot to move like a robotic vacuum.

Word Search

Solve a word search puzzle by highlighting words with your VR Robot.

Castle Color Match

Program the VR Robot to pick up and place disks around the Castle!

Crash the Castle

Create an algorithm to knock over different Castle layouts using the VR Robot in this constantly changing challenge.

On Target

Hit the bullseye by drawing angles with your robot!
